

Frequently Asked Questions

What are nutritional supplements?

Supplements are a dietary product that:

- Are intended to supplement what you eat
- Contain one or more dietary ingredients, including vitamins, minerals, herbs or other botanicals, amino acids, and other substances or their constituents
- Are intended to be taken by mouth, such as a pill, capsule, tablet, or liquid
- Are labeled as a dietary supplement

What is cGMP certification?

Current good manufacturing practices (cGMP) is a manufacturing certification that helps to ensure quality nutritional supplements and other products. In the US, complying with cGMP is a mandatory aspect in pharmaceutical manufacturing to safeguard the health of patients.

What are other advantages of taking PruTectRx supplements?

All PruTectRx SurgiPack supplements are hypoallergenic and free of fillers, coatings, binders, allergens, artificial colors, preservatives, hydrogenated oils, mercury, and other undesirable ingredients.

Our supplements also have the purest ingredients (over 99%) and feature several ingredients that are scientifically proven to maximize absorption of all ingredients, known as “bioavailability.” PruTectRx supplements also deliver the most consistent and powerful cellular levels of vitamins, minerals and anti-aging nutrients compared with other products that are sold to the general public in stores or over the internet.

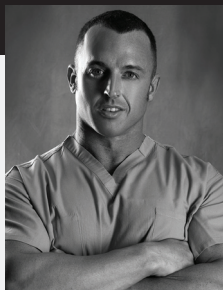

Where are the products manufactured?

All SurgiPack ingredients are made in the USA in state-of-the-art, NSF-GMP registered, certified facilities. These facilities exceed the standards of the United States Pharmacopeia (USP).

Where can I find more information?

Product information sheets, drug interactions, other frequently asked questions, and additional resources are offered on our website at www.PruTectRx.com

About Dr. Chad Prusmack

Dr. Chad Prusmack, MD, is a board-certified neurosurgeon. He graduated magna cum laude in Biophysics from Harvard University where he was captain of the Harvard Lacrosse team. He received his MD at Columbia

University where he did extensive cardiothoracic research with Dr. Mehmet Oz and graduated at the top of his class. At the University of Miami, he completed his neurosurgical residency and received extensive training in complex spine instrumentation, minimally invasive surgery, sports medicine and spinal cord injury. As known to his patients, “Dr. Chad” is also the neurosurgical consultant for the Denver Broncos and is considered a world leader in the field of minimally invasive spine surgery.

Dr. Chad has broad experience with the spine and skull base. In 2008, he developed and pioneered minimally invasive spine fusion techniques and instrumentation, which have led to remarkable improvements in patient recoveries around the world.

With Dr. Chad’s vast experience in science and medicine combined with his unique background in athletics and health, he created the company PruTectRx to produce nutritional supplements that accelerate surgical recovery for all via our website at www.PruTectRx.com.

PruTectRx’s mission is to provide safe, customized, cGMP certified nutritional supplements to improve the vitality and longevity of all.

PruTectRx’s mission is to provide safe, all-natural, cGMP certified nutritional supplements to improve the vitality and longevity of all.

SURGI PACK
ACCELERATE YOUR SURGICAL RECOVERY

SurgiPack is a bundle of cGMP certified nutritional supplements, hand-picked by one of the country’s leading neurosurgeons—Dr. Chad Prusmack—to ensure an optimum surgical recovery.

www.PruTectRx.com

A minor surgery is one that happens to someone else. Whether major or “minor,” the focus for those of us going under the knife is to get better as soon as possible. While it’s your surgeon’s responsibility to resolve your health issue, the speed of your recovery is up to you. SurgiPack is a revolutionary new way to accelerate your surgical recovery.

SurgiPack from Dr. Chad Prusmack features four key nutritional supplements from PruTectRx: ProteinPruTect, Omega3PruTect, OsteoPruTect, and NeuroPruTect. Patients taking each supplement in SurgiPack 30 days before and 30-90 days after surgery—in the “perioperative” period—will optimize their surgical recovery in the following ways:

- Boosts Immunity
- Supports GI Health
- Maintains Lean Muscle Mass
- Promotes Appetite Suppression
- Provides Cardio-Protection
- Enhances Tissue Strength
- Improves Bone Strength
- Contains Prebiotics
- Protects Neurological Function
- Provides Antioxidant Support

SurgiPruTect

ProteinPruTect

Following Surgical Recovery: What Next?

PruTectRx offers a comprehensive line-up of nutritional supplements that promote daily wellness (WellnessPack), facilitate weight loss (WeightLossPack), and optimal levels of Vitamin D (VitaminD3PruTect). Find out more at www.PruTectRx.com.

ProteinPruTect

1-2 scoops per day

Formulated for professional athletes and weightlifters, ProteinPruTect offers protein-optimized immune function for amateur and serious athletes, those who work out rigorously and anyone looking to improve digestive health.

Dr. Chad's Surgical Recovery Tip

ProteinPruTect boosts immune function in light of stress from surgery—particularly with its main ingredient: serum-derived immunoglobulin concentrate, which boosts immunoglobulin levels in the gastrointestinal (GI) tract. ProteinPruTect also includes arabinogalactan (a prebiotic) and a non-GMO, vegetable-based protein (pea protein isolate, rice protein concentrate, taurine, L-glutamine, and glycine). ProteinPruTect is a vegan, all-natural, gluten-free, dairy-free, fructose-free formula.

OsteoPruTect

1 calcium capsule and 1 ch-OSA® capsule

Supports healthy bones, cartilage and ligaments with 550mg of highly absorbable calcium (MCHC) that binds with the collagen catalyst, ch-OSA (3mg). The addition of Vitamin D3 (2,000 IU) further stimulates calcium absorption and utilization.

Dr. Chad's Surgical Recovery Tip

MCHC (microcrystalline hydroxyapatite concentrate) is a safe, bovine-sourced bone extract that contains a crystalline calcium and phosphorus matrix in the ideal ratio of 2:1. ch-OSA (choline-stabilized orthosilicic acid) is a well-absorbed form of silicon. Silicon-dependent enzymes link together single chains of amino acids to synthesize collagen fibers. The surfaces of these collagen fibers act as binding sites for MCHC. The more surface area available to the MCHC to bind to, the more flexible the bone.

Omega3PruTect

2 softgels per day

This enteric-coated, cGMP certified fish oil supplement features 1.4g of Omega-3, 450mg of EPA and 330mg of DHA—all of which supports cardiovascular health, mental health, GI health, and platelet aggregation.

Dr. Chad's Surgical Recovery Tip

Omega-3 found in fish oil is particularly useful for supporting the health of the body's four types of tissue following surgery: connective, epithelial, muscular, and nervous. To ensure maximum pureness and freshness, our fish oil is stabilized with vitamin E, is molecularly distilled, and is independently verified to be free of PCBs, heavy metals and pesticides. Enteric-coated softgels support compliance and absorption without the dreaded “fishy burps” and bloating.

NeuroPruTect

1 capsule per day

Supports brain health with 200mg of turmeric rhizome extract (95% curcuminoids) by boosting mental acuity, improving memory, increasing alertness, and providing antioxidant support.

Dr. Chad's Surgical Recovery Tip

Turmeric's primary drawback is its inability to be readily absorbed through the digestive system on its own. NeuroPruTect solves this problem by including BioPerine®, a patented black pepper extract that has been shown to increase intestinal absorption rates of turmeric into the bloodstream by 2,000%. NeuroPruTect also contains SGS broccoli seed extract, which provides three days of antioxidant support and the highest level of glucoraphanin (13%) than most other nutritional supplements.
